## Partner Solution

---

### ■ **Target Industry**

*Cross Industry*

### ■ **Business Applications**

*Pre-Configured Frameworks for:*

*Claims Processing*

*Knowledge Management*

*Loans Processing*

*Contract Management*

*Sarbanes-Oxley*

*Compliance Management*

*Legal*

*Project Lifecycle*

*Management*

### ■ **Products**

*IBM FileNet Business Process  
Manager*

*IBM FileNet Content Manager*

*IBM FileNet eForms*

*IBM FileNet Records Manager*

### **Business Challenge**

Corporations and government organizations alike are challenged with managing enormous volumes of information. To provide superior customer care, drive revenues, ensure compliance and streamline overall efficiency, organizations must leverage content to their advantage.

For many organizations, however, gaining control of intellectual property and information is a difficult undertaking. Many enterprises are aware of the benefits of content management and business process management solutions, but don't have the time or resources to support lengthy, complex implementations. They fear costs associated with training to bring employees up to speed on yet another system will far outweigh the perceived benefits. Others have installed solutions that are underutilized.

Fearing change, many organizations continue to store information on individual computers and networks, where the content is neither controllable nor searchable, and where it is inaccessible to the rest of the organization. They continue to use laborious manual version control processes, physically walking documents from one reviewer to the next. And they pray that they are

not struck by a natural disaster or a compliance audit.

### **Solution**

Integranium, specialists in custom Content Management and Business Process Management integrated solutions, has developed PaperWork, an application with pre-configured solutions for Contract Management, Claims Processing, Knowledge Management, Project Management, Loans Processing, Compliance Management for Sarbanes-Oxley, and many others. Adding XML configurations to PaperWork enables the creation of additional solutions, without the need for application coding.

Based on IBM FileNet P8, this highly configurable, rich Internet application greatly enhances the user interface experience for IBM FileNet Content Management and Business Process Management system administrators. A J2EE-based thin client application, PaperWork can be accessed via any Web browser. Using Adobe's Flex 2 technology to drive its rich user interface, PaperWork minimizes the number of clicks required to perform daily tasks. Flex 2 also makes integration with existing enterprise applications easy through a Service Oriented Architecture (SOA).

PaperWork enhances content management by providing the look and feel of any desktop application, and requires no deployment on system user's computers. PaperWork provides users with the ability to package custom objects and document classes into application groups. Documents containing metadata are captured easily, including those contained in IBM FileNet P8 custom objects. PaperWork enables quick searches for information, using forms-based queries, and document version control is simplified with PaperWork's check-out and check-in processes.

For business process management, PaperWork streamlines workflow statistics with a "dashboard" view, providing a complete graphical representation of workflow steps and work queue level statistics, managing inbox and public queues. PaperWork provides a workflow step processor, enabling system users to easily search, filter and organize items in the workflow queue.

### **Value Proposition**

Integranium understands organizations' needs for efficient time-to-market, especially for those installing new technologies. PaperWork's pre-configured solution framework makes creating customized applications, spanning all business domains, quick and easy, by eliminating the need for coding. PaperWork becomes a portable application with its ability to perform on any J2EE server.

With 15 years of experience in software architecture, design and development, Integranium has helped many enterprise IT customers with Enterprise Application

### **Company Description**

Integranium, Inc. is a Portland, Ore.-based Information Technology solutions and service provider of enterprise software technologies, architecture and Enterprise Application Integration (EAI). Integranium specializes in IBM FileNet Content Services to FileNet P8 conversions, custom Content Management and Business Process Management integrated solutions based on FileNet P8, single sign-on and application integration.
